

eV

Interactive

We are a full-service, privately held video game development studio located in the suburbs of Chicago. With roots in 3D action games for consoles and PCs, we also apply our technology and expertise to develop "serious games" for military, industry, education and health-related fields. We are a group of no-nonsense, down-to-earth professionals producing quality products that keep our customers and clients coming back for more.

Full-Service Studio

- Develop products from raw concept to gold-master, or execute existing client designs.
- Comfortable with both large licensed properties and new proprietary IP.
- Interpret grant, SBIR and institutionally funded RFPs and turn them into executable designs.
- Experienced in certification, testing, localization and support for custom hardware.

Technology

- Control costs using our in-house cross-platform game engine proven in multiple products through first-party certification and at retail.
- Or, we can build games on your existing internal or licensed engines and middleware.
- Leverage existing tools, techniques and game entities to rapidly prototype new concepts.
- Remove technology and development risks by leveraging our experience and professionalism.

Philosophy

We operate in small teams with a strong product-first philosophy. Whether it is a multi-console holiday release with a major licensee, or a grant-funded research study, each project gets the specific care and attention required to deliver a quality game. We know how design, requirements, schedule and budget affect a project and we work to assure the end result maximizes these parameters.
